## TEXA PRESENTS THE NEW AXONE 5

**Diagnostic tool dedicated to cars and bikes environments, with a wide screen, high software performance and an excellent price/quality ratio.**

**AXONE 5** is the new display unit designed by TEXA for all the diagnostic operations on the vehicles belonging to the **CAR** (cars, light commercial vehicles) and **BIKE** (motorbikes, scooters, quad bikes, snowmobile) **environments**. It is an **extremely easy-to-use** tool, manufactured with latest-generation components to ensure accurate repair operations to the highest standard.

AXONE 5 is proposed to workshops at an **excellent price/quality ratio** along with the reliability and user experience that are typical of TEXA products. It is a **solution within everyone's reach**, ideal for the most expert and demanding users but also for mechanics who have just opened a new business.

Thanks to the **IDC5a PLUS software** and to the **Android operating system**, AXONE 5 is quick, intuitive, and provides excellent performance. Mechanics will have a complete support to their repair operations by accessing a large internal archive of **wiring diagrams, mechanical data and technical data sheets**. Furthermore, the quad-core ARM® Cortex® A9 processor with graphics accelerator provides the tool with computing power and efficiency in resource management. A wide **capacitive screen (9.7 inches with a resolution of 2048x1536 pixels)** guarantees ultimate definition and total precision to the touch.

AXONE 5 is resistant to shocks and falls and is equipped with an anti-slip surface that makes it steady to handle. A trusted companion for the professional that operates in a tough working environment, in mobility and outside the workshop.

**Brief TEXA profile:** TEXA was founded in 1992 and is today a European leader in the design, industrialisation and production of diagnostic tools and devices for the remote diagnosis on vehicles, motorcycles, trucks, agricultural vehicles and marine engines. TEXA is worldwide with an extensive distribution network; through its subsidiaries it sells in Spain, France, the UK, Germany, Poland, Russia, the United States, Brazil and Japan. Currently there are approximately 600 TEXA employees in the world: the manpower is young (the average age is 33), 45% have a university degree and among these almost 100 are engineers and specialised technicians dedicated to Research and Development.
