

Simplifying the present,
anticipating the future

Monastier di Treviso, 15 December 2021

TEXA WON THE SEVENTH EDITION OF THE "PRIX DE L'ÉQUIPMENT"

The French magazine *Décision Atelier* awarded the most innovative tools in the world of workshop equipment and RCCS 3 received the "Équipement de l'Année 2022" prize.

TEXA also won in the "Mécanique" category with KONFORT TOUCH 780 BI-GAS.

A memorable end of the year for TEXA and its French subsidiary. In fact, the "**Prix de l'Équipement**" awarding ceremony took place on Tuesday 14 December in Paris. Organised by **Décision Atelier**, one of the main French magazines in the industry, the event is dedicated to awarding the most innovative equipment for mechanical workshops. As many as **36 brands** participated with their solutions and were evaluated by a **jury of experts** composed of representatives of the main distribution brands.

The most prestigious prize of the evening, the "**Équipement de l'Année**", was awarded to **RCCS 3** in its version with monitor. The solution for the calibration of the ADAS developed by TEXA was evaluated as the best thanks to its many technological innovations, among which: **75-inch HD monitor with 4K definition, built-in intelligence, 1:1 proportion ratio of the digital panels, in compliance with the specifications of car manufacturers.**

TEXA also won in the "Mécanique" category with **KONFORT TOUCH 780 BI-GAS**, top of the range among the A/C service stations and another major innovation presented by TEXA just this year.

"We are very proud of winning such an award, with two highly innovative products, even more so because we were evaluated by professionals in the distribution world, who are deeply familiar with our industry – said **Francis Pegues, Director of TEXA France**. We are very happy also because it confirms the great work we have done so far, and it pushes us to work even harder next year".

TEXA
Founded in 1992, today TEXA is leader in Europe for the design, industrialisation and production of diagnostic tools and tele-diagnostic devices dedicated to cars, bikes, trucks, agricultural vehicles and marine engines. Present all over the world with a widespread net of distributors, it commercialises directly in Spain, France, the United Kingdom, Germany, Poland, Russia, the United States, Brazil and Japan through its subsidiaries. TEXA currently employs over 730 people worldwide: the manpower is young (the average age is 33), 45% of which have a university degree, and among these over 150 are engineers and specialists dedicated to Research and Development.
